

## Recombinant SARS-CoV-2 S1 Protein

## (C-6His)

Catalog #	EPT049
Expression Host	Human Cells
DESCRIPTION	Recombinant SARS-CoV-2 S1 Protein is produced by
	our Mammalian expression system and the target
	gene encoding Val16-Arg685 is expressed with a 6His
	tag at the C-terminus.
Accession	QHD43416.1
Synonyms	S1 protein; 2019-nCoV S1 protein; coronavirus S1
	Protein; cov S1 Protein
Mol Mass	75.8kDa
AP Mol Mass	100-130kDa, reducing conditions
Purity	Greater than 90% as determined by reducing
	SDS-PAGE.
Endotoxin	
FORMULATION	Supplied as a 0.2 $\mu m$ filtered solution of PBS, pH 7.4
RECONSTITUTION	
SHIPPING	The product is shipped on dry ice pack.Upon receipt,
-

STORAGE

store it immediately at the temperature listed below. Reconstituted protein solution should be stored at  $\leq$  -20°C.

BACKGROUND The spike (S) glycoprotein of coronaviruses is known to be essential in the binding of the virus to the host cell at the advent of the infection process. Most notable is severe acute respiratory syndrome (SARS). The severe acute respiratory syndrome-coronavirus (SARS-CoV) spike (S) glycoprotein alone can mediate the membrane fusion required for virus entry and cell fusion. It is also a major immunogen and a target for entry inhibitors. It's been reported that 2019-nCoV can infect the human respiratory epithelial cells through interaction with the human ACE2 receptor. The spike protein is a large type I transmembrane protein containing two subunits, S1 and S2. S1 mainly contains a receptor binding domain (RBD), which is responsible for recognizing the cell surface receptor. S2 contains basic elements needed for the membrane fusion. The S key parts in the induction of protein plays neutralizing-antibody and T-cell responses, as well as protective immunity.
